

## **Institute for Advanced Analytics**

The Institute for Advanced Analytics completed its fifth year of operation and graduated 38 students in the Master of Science in Analytics (MSA) degree program. The Institute will increase enrollment to 80 students beginning in June.

The new enrollment doubles the instructional and administrative load of the MSA program, and therefore it will double the space and human resource requirements of the Institute.

The retrofitting of additional space began in April and is currently two months behind schedule.

No additional staff members have been hired to date and one existing EPA staff member resigned in May, which will require the Institute's director to work two jobs—with double the administrative load in each—for the foreseeable future.
