

## Planning and Assessment Fact Sheet

Definition		Examples
<b>What:</b>	<p>Measure Student Learning Outcomes: Articulate what you want students to be able to do/know/grow.</p> <p><b>**These should only be stated when you teach to the outcome. Be intentional.</b></p>	<ol style="list-style-type: none"> <li>1. Student participants will exhibit healthy behavior.</li> <li>2. Student participants will develop their leadership style.</li> </ol> <p>Example of unintentional “outcome”: Articulating an outcome about diversity and expecting them to “learn” because students from various backgrounds attend the program.</p>
<b>Why:</b>	<p>To Make Data based decisions:</p> <ol style="list-style-type: none"> <li>1. for improvement of specific teaching methods and curriculums (Did they learn what I wanted them to learn in this event/program/course/curriculum?)</li> <li>2. to know/prove a program has a larger impact</li> </ol> <p><b>*These are clearly related but not necessarily the same. Sometimes you can measure both at the same time but not always.</b> Does the measure tell you how you can enhance your work? Either specific programming or bigger picture planning?</p>	<ol style="list-style-type: none"> <li>1. A. I want to make an event better and I want to know what changes to make. B. I want to decide what events to do or drop.</li> <li>2. I want to know/prove that what we do matters. Do they look different from other students in terms of other measures-GPA, retention rates, leadership skills, engagement, GEP measures?</li> </ol>
<b>Where/ When:</b>	<p>Timeframe: Depends on why.</p> <ol style="list-style-type: none"> <li>1. <b>During Teaching:</b> In your programs-how are you teaching them (intentionally)? Assess during or shortly after the teaching occurs. Use teaching tools to measure when possible to have direct measures.</li> <li>2. <b>Post Teaching:</b> Big picture measures are usually end of the semester or year</li> </ol>	<ol style="list-style-type: none"> <li>1. Evaluation after a one time program</li> <li>2. Evaluation after each of a series of on-going classes</li> <li>3. After a series of on-going classes</li> </ol> <p><b>Example:</b> Assess each of 10 leadership programs given over the course of a year then measure the impact of the series of programs on the development of leadership style/skills via survey, portfolio, etc.</p>
<b>How:</b>	<p>Measures: Depends on why (ROI)</p> <ul style="list-style-type: none"> <li>• Multiple methods when possible and appropriate</li> <li>• Do not make assumptions (in instrument development or interpretation of results)</li> </ul>	<p>Observations, Surveys, Focus Groups, Interviews, Document Analysis</p> <p>Example of multiple methods and multiple “whys”: A Peer mentor program: <b>During :</b> Prog evals of training sessions, observations of group interactions with rubric <b>After:</b> Mentor portfolio review of leadership development, final GPA and retention of students in the program.</p>

- Remind yourself that everything you do is ‘teaching.’ Your work with students should:
  - Contribute to the learning/development of the articulated department level student learning outcomes.
  - Contribute to the learning/development of the articulated area student learning outcomes (if they are different).
  - Include articulated outcomes (may be only 1 to 3)for each individual event/programs.
- Other uses of data: participation numbers and non-participant data-program evaluation/standards and are you meeting NCSU demands-This type of assessment is necessary but not sufficient.
